

CoolOR® CIRCULATING WATER SYSTEMS

We offer two styles of circulating water cooling vests. These vests cool by circulating cold water through a series of tubes sewn into the vest. The tubing is sewn on the inside of the vests providing more effective cooling than when sewn on the outside. Both vest styles have a zipper front that allows for easy on and off, and are available in a large variety of sizes.

CoolOR® ADJUSTABLE COOLING VEST

We offer two fabric options for our adjustable style cooling vests:

- 100% cotton or
- Engineered breathable nylon: easy-to-clean and can be wiped down

The adjustable style vest will fit a larger range of people and features chest and waist adjustment straps to cinch the vest to the body. Our adjustable cooling vest has adaptable sizing to fit various OR workers! Use the velcro straps at the waist to modify to the specific size. Sizes range from S to 3XL.

CoolOR® FITTED COOLING VEST

Provides a snug, and lightweight fit. No adjustments are required.

- 97% cotton / 3% spandex blend (only option available)

The fitted style vest is constructed of a high quality fabric with a small amount of stretch which allows for a comfortable, slim fit. Sizes range from S to 4XL.

NOW AVAILABLE - MULTI-PERSON SYSTEMS!

Cool two, four or six people at the same time with a single cooling reservoir!

“The surgeons just absolutely love the Cool Flow® cooling vests. We’ve had to order one for each because they were fighting over who gets to use it.

Great product, works wonderful and they love it!”

- OR Buyer, Terre Haute Regional Hospital in Richmond, Virginia

“I love my [Polar Cool Flow®] vest! It works very well and keeps me cool and comfortable during surgeries lasting up to 9 hours”

- Dr. Heather, KY

COOLING RESERVOIRS

We offer three sizes of cooling reservoirs to fit your needs.

The larger the reservoir, the more ice you can use and therefore the longer your cooling will last. The 13, 19 and 30 quart cooling reservoirs are constructed with high-performance coolers which feature neoprene gasket seals, high density insulation, and stainless steel compression latches. These dry boxes will not leak if knocked over.

Lithium-ion
Battery Pack

Allows the unit to be run for up to six hours without a power supply cord running to the wall.

INTEGRATED WHEELS & RETRACTABLE HANDLE OR OPTIONAL WHEELED CART

The 19 and 30 quart systems come standard with integrated wheels and a retractable handle for easy mobility of the cooling reservoir. We also offer a wheeled basket cart that you can get instead of the wheels and retractable handle. This cart includes space for hanging the vest, and storing the cooling reservoir and tubing when not in use.

Optional
Wheeled
Basket

Retractable Handle

Wheels

THE ARCTIC CHILLER

The chiller system eliminates the need for ice!

Available for 9 and 13 quart systems. Simply fill the cooling reservoir with water and set the chiller at the desired temperature between 4°C (40°F) and 21°C (70°F). The anti-freezing system will not allow the heat exchanger to freeze.
